traq-wireless and Teligistics Partner to Blend Landline Expertise With Enterprise Wireless Management

AUSTIN and HOUSTON, Texas — June 17, 2002 — traq-wireless, the leading provider of enterprise wireless management solutions, has partnered with Teligistics, a leading telecommunications cost management and containment consulting firm, to enable enterprises to control the costs of their entire telecom environment. Teligistics and traq will partner to provide clients with a complete solution for wireless and wireline audit, analysis and optimization of usage and costs.

Leading, bottom lined oriented companies today utilize telecommunications management software and consulting services to organize, analyze and optimize their wireless users, usage, devices, carriers and associated costs. The combined offering will provide an impressive 40-60% savings in annual telecom service costs, best practices for management reporting, and employee policy enforcement and carrier accountability. Additionally, customers will have the ability to use this combined solution to reduce the cost of their telecom providers, ensure consistent terms and conditions across suppliers, and provide a process for ongoing asset and expense management.

Together, traq and Teligistics have assisted Fortune 1000 Companies to reduce wireless, local dial tone, long distance, and data expenses while streamlining the overall operational costs and management processes. Companies are taking advantage of wireless capabilities as a competitive differentiator and to enhance employee productivity. However, the overall costs and ROI are rarely fully realized. Both traq and Teligistics are bringing years of experience and sophisticated software to control and contain cost for corporations that realize the increasingly important role telecommunications plays as part of their normal business operations.

“The combination of enterprise wireless management and landline expertise provides an incredible value to our joint clients,” said David Roberts, President of Teligistics, “We understand our customers need both wireline and wireless costs savings. Partnering enables the best of both capabilities.”

Jim Offerdahl, traq President added, “Knowing that wireline is a staple of everyday business needs, making the jump to wireless is unwieldy. Companies now need to ensure complete

telecommunication management for overall efficiency and *traq* is the best-of-breed solution for wireless management.”

About Teligistics

Teligistics is a Houston-based telecommunications auditing and consulting firm that specializes in telecommunications cost containment through a patent-pending software application named "The Analyzer". The firm uses proprietary technology to reduce, contain, audit and manage client telecommunications expenses. Teligistics also conducts telecom RFQs and specialized telecom project management. Clients typically hire Teligistics on a contingency basis where Teligistics participates in the savings and/or recovery of overcharges. Teligistics clients experience an average reduction in their telecom expenses exceeding 40% when using Teligistics' full suite of applications. For more information, visit the web site at www.teligistics.com.

About *traq-wireless*

traq-wireless is the leading provider of enterprise wireless management solutions. *traq* offers software and professional and support services for enterprises to manage the complexities of supporting their rapidly growing community of wireless users and to also dramatically reduce their wireless service costs. Headquartered in Austin, Texas, *traq* provides objective management, unsurpassed cost containment and optimization, and unparalleled visibility into multi-carrier, corporate wireless service costs resulting in comprehensive control and up to 40% annual costs savings for enterprise customers. As wireless capabilities continue to proliferate in the enterprise, *traq's* comprehensive management approach is required to fully leverage the current and next generation voice and data services.
